PUBLICATIONS AND REPORTS

Publications and Manuscripts

The following four papers appeared in Language by Ear and by Eye: The Relationships Between Speech and Reading, ed. by J. F. Kavanagh and Ignatius G. Mattingly. (Cambridge, Mass.: MIT Press, 1972):

How is Language Conveyed by Speech?
Franklin S. Cooper, 25-45.

Reading, the Linguistic Process, and Linguistic Awareness.
Ignatius G. Mattingly, 133-147.

Misreading: A Search for Causes.
Donald Shankweiler and Isabelle Y. Liberman, 293-318.

Background of the Conference.

*Appears in this report, SR-31/32.

*Reading and the Awareness of Linguistic Segments. Isabelle Y. Liberman, Donald Shankweiler, Bonnie Carter, and F. William Fischer

*Ear Advantage for Stops and Liquids in Initial and Final Position. James E. Cutting.

*Hemiretinae and Nonmonotonic Masking Functions with Overlapping Stimuli. Claire Farley Michaels and M. T. Turvey.
Reports and Oral Presentations

Colloquia. Ruth S. Day. Program in Psycholinguistics, University of Michigan, 13 July 1972; Department of Psychology, Princeton University, 4 October 1972; and Department of Psychology, University of Pennsylvania, 17 October 1972.

APPENDICES

DDC (Defense Documentation Center) and ERIC (Educational Resources Information Center) numbers:

SR-21/22 to SR-29/30

Errata

SR-28 (October - December 1971)

Page 124, figure 5, lower bar should read: bAζə
Page 126, table III, letters under Subject 2 should read: /p/ /t/ /k/

Page 138, paragraph 4, adductor should read: abductor
Page 141, line 2, statis should read: static

SR-29/30 (January - June 1972)

The Phi Coefficient as an Index of Ear Differences in Dichotic Listening. Gary M. Kuhn (75-82).

Page 76, lines 8 and 9 should read: L = the number of left-ear responses
R = the number of right-ear responses
This report (1 July-31 December) is one of a regular series on the status and
progress of studies on the nature of speech, instrumentation for its investigation, and
practical applications. Manuscripts cover the following topics:
-Specialization of the Language Hemisphere
-Cerebral Dominance for Speech Perception
-Degree of Encodability and Ear Advantage
-Memory for Speech-Nonspeech Dichotic Pairs
-Ear Advantage for Stopped and Liquids in Initial and Final Position
-Ear Advantage in Retention of Words Presented Monaurally
-Ear Advantage in Choice Reaction Time to Vowels Presented Monaurally
-Perceptual Processing Time for Consonants and Vowels
-Six Fusions in Auditory Research: A Preliminary Report
-Constructive Theory, Perceptual Systems, and Tacit Knowledge
-Hemiretinae and Nonmonotonic Masking Functions with Overlapping Stimuli
-Retroactive Contour Enhancement Effect: Visual Storage or Visual Masking?
-Reading and the Awareness of Linguistic Segments
-Machines and Speech
-Automated Reading Service for the Blind
-Physiological Aspects of Certain Laryngeal Features in Stop Production
-Effect of Speaking Rate on Labial Consonant Production: EMG and Cine Study
-Stop Consonant Voicing and Pharyngeal Cavity Size
-EMG Study of Speech Musculature During Lingual Nerve Block
-Velar Activity in Voicing Distinctions: EMG and Endoscopic Study
-Electromyographic Study of the Tones of Thai
